

Rook Dispatch — Release History

Release Notes Archive · 4.x series · Compiled by Engineering, Dispatch

Releases ship monthly. This archive carries the customer-facing notes as published to agency administrators.

4.2 — released 12 August 2026

- **Routing weight rebalance.** Proximity is weighted more heavily relative to recent acceptance history when ranking responders for a callout. Long-requested by agencies operating over wide geographies.
- **Callout offer timeout reduced from 90 seconds to 60 seconds.** Offers that go unanswered move to the next responder sooner.
- Console filter selections now persist between sessions.
- Three defect fixes: duplicate push notification on re-offer; capability tag ordering in the responder detail panel; incorrect timezone on the coverage report export.

4.1 — released 16 June 2026

- Proximity now uses a travel-time estimate rather than straight-line distance.
- Bulk callout for incidents requiring more than one responder.
- Mobile push delivery reliability improvements.

4.0 — released 7 April 2026

- New console navigation.
- Responder profile redesign.
- Audit log for routing overrides.

Release notes are published to agency administrators on the morning of release. Items deferred from a release are not listed here; see the current roadmap for planned work.
